

Participation of Humans in Research – Significant Risk

Policy Number:	4.1.1.2
Policy Section:	4.1 Youth Science & Technology Research – Ethics & Safety
Approved By:	National Judging Committee
Date Approved:	October 1, 2012
Date Effective:	Immediately
Date Last Amended:	August 1, 2015
Date of Next Review:	On or before August 1, 2018
Contact:	Chair, National Ethics Committee

1 Introduction

- 1.1 A Significant Risk Project involves conditions where the risk of harm is greater, or is potentially greater, than that encountered in everyday life. Low Risk projects are defined here. ALL OTHER PROJECTS are, by definition, Significant Risk Projects.
- 1.2 The implementation of this policy is described on the web site of the Youth Science Canada National Ethics and Safety Committee. This material must be read by both students and their supervisors.
- 1.3 All students must submit a Research Plan to the Chair of the Regional STEM fair Ethics Committee before starting their experiments.

2 Definitions

- 2.1 Human Research refers to any project that involves the generation of data about persons.
- 2.2 A Student Researcher is one who takes data or collects information or assists in research activities involving humans.
- 2.3 A Participant is a person who takes part in a project or activity and so is a source of primary data and bears any risk as the research is being carried out.
- 2.4 The Adult Supervisor, a parent, teacher, professor, or scientist is responsible for ensuring that the student is aware of the ethical issues involved in the project and provides guidance and advice to ensure that Youth Science Canada policy is followed. The Adult Supervisor is responsible for ensuring that the student's research is eligible for entry into the CWSF, and related or other events sponsored by Youth Science Canada. Every project involving the participation of humans, or the use of animals requires an Adult Supervisor.
- 2.5 The Scientific Supervisor, who will usually have an advanced degree, must be involved in a Significant Risk project, which often takes place in a university, institutional, industrial or government laboratory. The Scientific Supervisor is responsible for ensuring that (a) all provincial and federal laws governing safety, handling of materials, and procedures are followed; (b) that all applicable policies concerning research ethics and the participation of humans are known to the student and adult supervisor and are followed. The Scientific Supervisor may be the Adult Supervisor.

3 Significant Risk Projects

3.1 Drugs

- a) Definition of a "drug": "drug" includes any substance or mixture of substances manufactured, sold, or represented for use in:
 - i) the diagnosis, treatment, mitigation or prevention of a disease, disorder, abnormal physical state, or its symptoms, in humans or animals,
 - ii) restoring, correcting, or modifying organic functions in humans or animals;
 - iii) disinfection in premises in which food is manufactured, prepared, or kept. (Ref. 1)
- b) Drugs may be used in any experiment exhibited at a STEM fair only if carried out in a Hospital, University, Medical or other similar Laboratory under the direction of a Scientific Supervisor. The study must be approved by the appropriate Scientific Review Committee that reviews the research at the Institution, and this must be documented by a letter that forms part of the application to the School, Regional or Canada-Wide Science Fair, or any event organized by, or coming under the auspices of Youth Science Canada. No other studies involving the use of Drugs on human participants, as defined above by Federal Regulations, may be exhibited at any STEM fair or similar event.

3.2 Invasive Procedures and Bodily Tissues

- a) Invasive procedures, such as taking blood or tissue samples, or use of human bodily tissue or other bodily fluids, are permitted in an experiment exhibited at a STEM fair only if carried out in a Hospital, University, Medical or other similar Laboratory under the direction of a Scientific Supervisor. The project must be approved by the appropriate Scientific Review Committee that reviews the research at the Institution, and this must be documented by a letter that forms part of the application to the School, Regional or Canada-Wide Science Fair, or similar YSC event.

3.3 Ingestion Projects - Allowed

- a) Projects involving ingestion of food or drink, defined as consumption through eating or drinking, are considered Significant Risk when they involve:
 - i) articles not manufactured, sold or represented as food or drink for humans.
 - ii) foods that contain additives exceeding the Recommended Daily Intake (RDI) normally associated with those foods.
 - iii) foods not considered to be basic, common, or everyday foods.
 - iv) products that are licensed Natural Health Products. These products are identified by a Health Canada Natural Product Number (NPN) or Exemption Number (EN) and are listed in the Health Canada Natural Health Product Database (Ref 2).
- b) Significant Risk Ingestion projects are allowed only if carried out under professional supervision at a laboratory with its own internal Ethics Review Committee, such as a university or hospital laboratory.
- c) Some provinces have put in place rules that govern ingestion of food by the public, and these take precedence over the rules in this section. Students doing ingestion projects must know the applicable procedures required for the safe handling of food.

3.4 Cannabis

- a) It is illegal for anyone under the age of 18 to possess cannabis. Any project that requires a student to possess cannabis is not permitted at a STEM fair.

- 3.5 Ingestion Projects - Forbidden
- a) The following ingestion projects are not eligible to participate in any event sponsored by Youth Science Canada:
 - i) Projects that involve the consumption of alcohol.
 - ii) Projects that involve the consumption of cannabis.
- 3.6 Exercise
- a) Projects involving exercise beyond normal everyday activities are Significant Risk projects. They require a Scientific Supervisor with training in exercise, such as a degree in kinesiology or appropriate coaching qualifications. Exercise testing must follow the Guidelines for Exercise Testing and Prescription, a publication of the American College of Sports Medicine. (Ref. 3)
- 3.7 Permitted Exceptions
- a) The projects listed in this section are eligible for presentation at STEM fairs and are permitted exceptions to the rules above.
 - i) Tests on saliva, sweat, tears and urine.
 - ii) Taking of cheek swabs.
 - iii) Projects investigating antiperspirant, mouthwash, sunscreen, or toothpaste.
 - iv) The following exception is permitted only when a qualified health care practitioner (such as a physician, nurse, dentist, or pharmacist) is supervising the project: Blood testing data collected using personal glucose monitors commonly available at pharmacies.

4 Informed Consent

- 4.1 Participants must give informed consent before taking part in any STEM fair project. The project and their participation in it must be explained to children in words they will understand. It must also be explained to children that they do not have to participate unless they want to, even if their parents have approved. Agreement to participate (assent) must be documented for each participant. Children over 9 years can be invited to indicate their assent by co-signing the same form their parent signed. Younger children can provide assent orally, but the researcher must document it.
- 4.2 If the participant is over the Age of Majority (18 or 19 depending on the province/territory) but not able to consent for themselves, the participant's legal guardian must sign the consent form. Assent of the participant must also be documented."
- 4.3 Informed Consent - Letter of Information
- a) Answers to the questions (1) to (12) must appear in the Letter of Information to ensure that the participants have been properly informed of all appropriate ethical issues:
 - i) What is the name(s) of the investigator(s); school; project title; the Adult Supervisor's name, email address and telephone number.
 - ii) What is the purpose of this research?
 - iii) What are the benefits to the participant from participating?
 - iv) What are the risks to the participant from participating?
 - v) What time commitment is required?

- vi) Payment for participation in research is discouraged. The decision as to whether to offer a nominal payment, either in cash or kind, is at the discretion of the student researcher, and must be approved by the adult supervisor.
 - vii) How will the confidentiality of the data be guaranteed?
 - viii) Is the following clearly explained in the Letter of Information? The participant has the right to withdraw at any time for any reason without consequences of any kind.
 - ix) How does the participant communicate a decision to withdraw from the study?
 - x) How will the results of the research be communicated to the participant?
 - xi) Are there any other issues that need to be included in the Letter of Information?
 - xii) Has the project been reviewed and received ethics approval from the appropriate committee? (A positive answer is mandatory for Significant Risk projects.)
- b) A sample Informed Consent - Letter of Information is available for download from the web site of the Youth Science Canada web site, given in Section 8 below.
- 4.4 Informed Consent - Permission Form**
- a) The Informed Consent - Permission form is a short document that contains:
 - i) The printed name and signature of the Participant.
 - ii) The printed name and signature of the person obtaining the Informed Consent.
 - iii) The signature of a parent or guardian.
 - iv) A statement that the Participant has received and understood the Informed Consent - Letter of Information.
 - v) The date.
 - b) A sample Informed Consent - Permission Form is available for download from the web site of the Youth Science Canada web site, given in Section 8 below.
- 4.5 Confidentiality**
- a) The confidentiality and anonymity of all participants must be maintained. Use coded systems of references; no identifying information may be used. Appropriate safeguards for storage and access to data must be planned. The date the data will be destroyed must be given.
- 5 Display**
- 5.1 The project display may include pictures of participants if prior permission has been obtained in writing. Projects dealing with forensic science topics must preserve the anonymity of any human victims, and project displays must avoid sensational or gratuitous macabre images.
- 6 Forms**
- 6.1 Form 4.1B - Approval of Significant Risk Projects Form – must be submitted to the Regional STEM fair and Canada-Wide Science Fair at registration for any Significant Risk project, along with any applicable Letter of Information, Blank Permission Form, and Sample Survey.
